

LUNA  
Electric shower bed

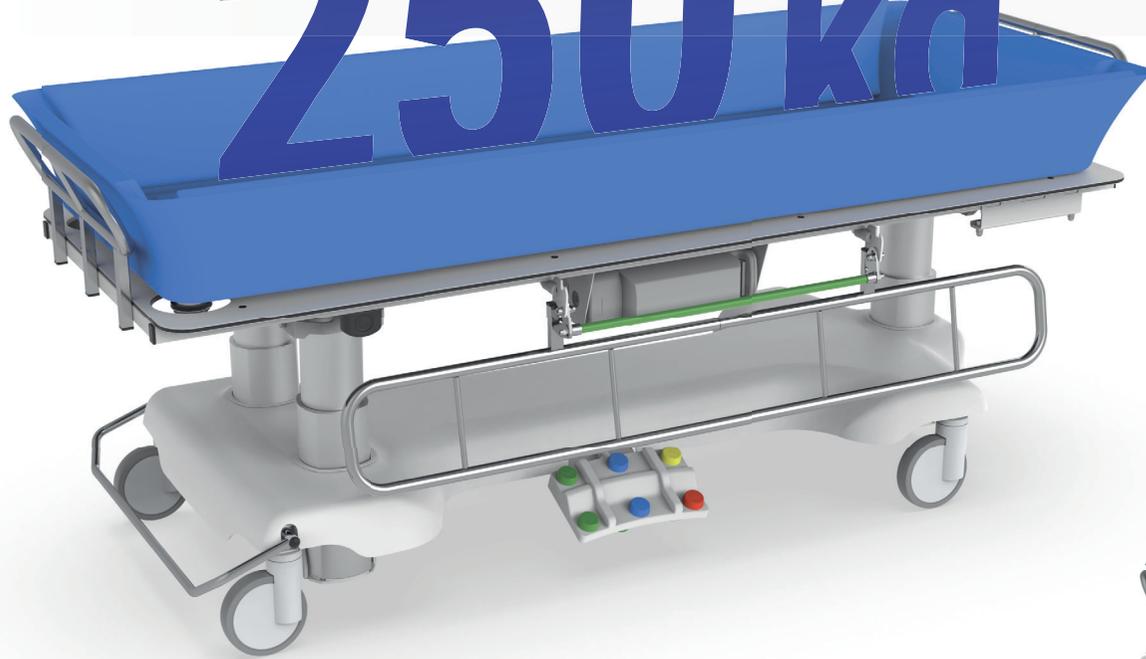

# LAGUNA

Shower bed for decent and reliable daily hygiene for immobile patients

Hospital staff mainly appreciate the comfortable and safe personal hygiene care of immobile patients or patients with reduced mobility. The shower couch is particularly suitable for use in hospitals, residential care facilities and homes for the elderly.

# 250 kg

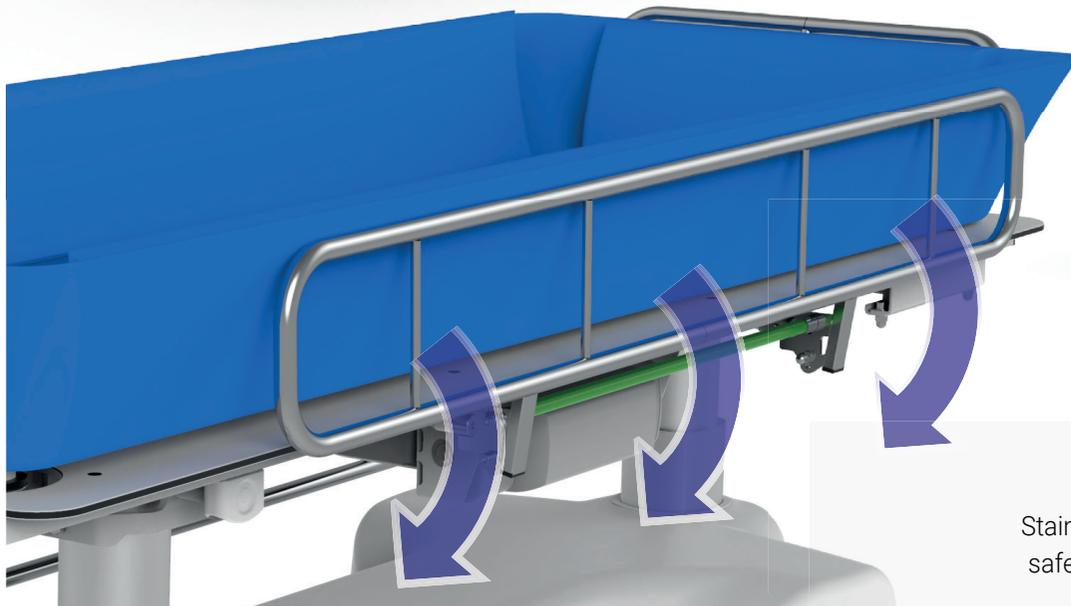

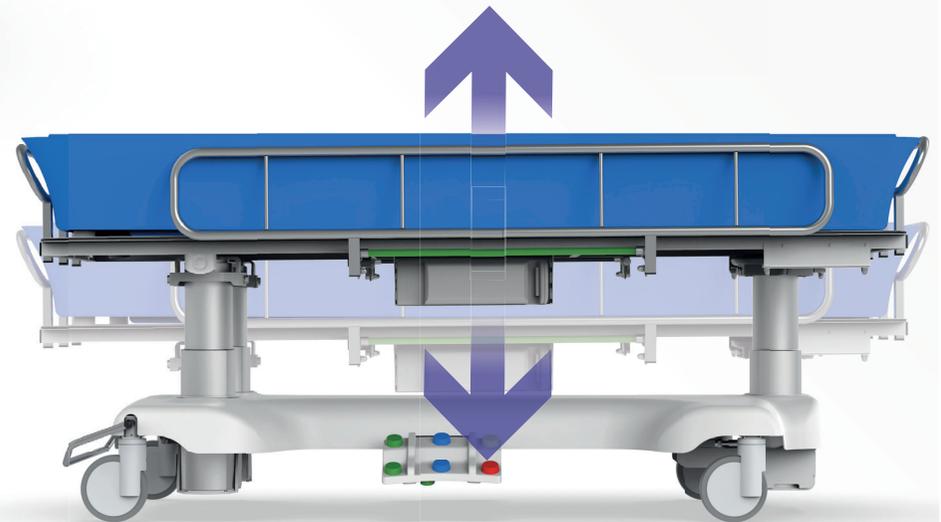

## Increased load capacity

The solid and stable construction with a safe operating load of up to 230 kg provides sufficient support even when caring for patients with higher body weight.

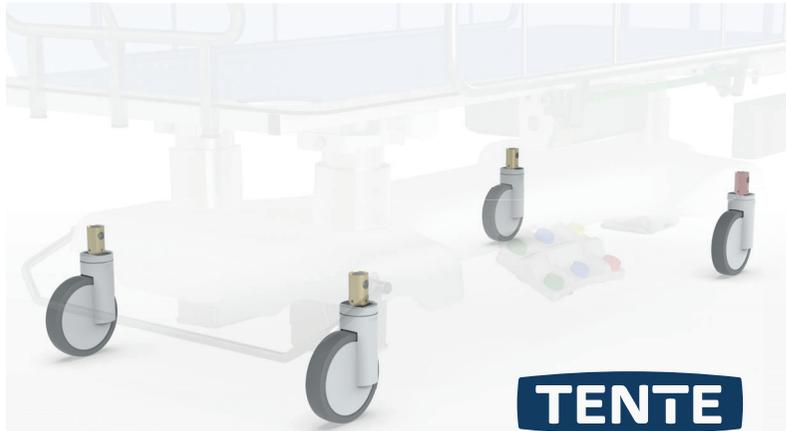

## Electric lift of the mattress

For easier access to the patient, the couch is equipped with an electric lift of the mattress platform.

## Side rails

Stainless steel hinged side rails with a special antibacterial coating provide maximum patient safety. Thanks to the large folding angle of the side rails, they allow good access to patients.

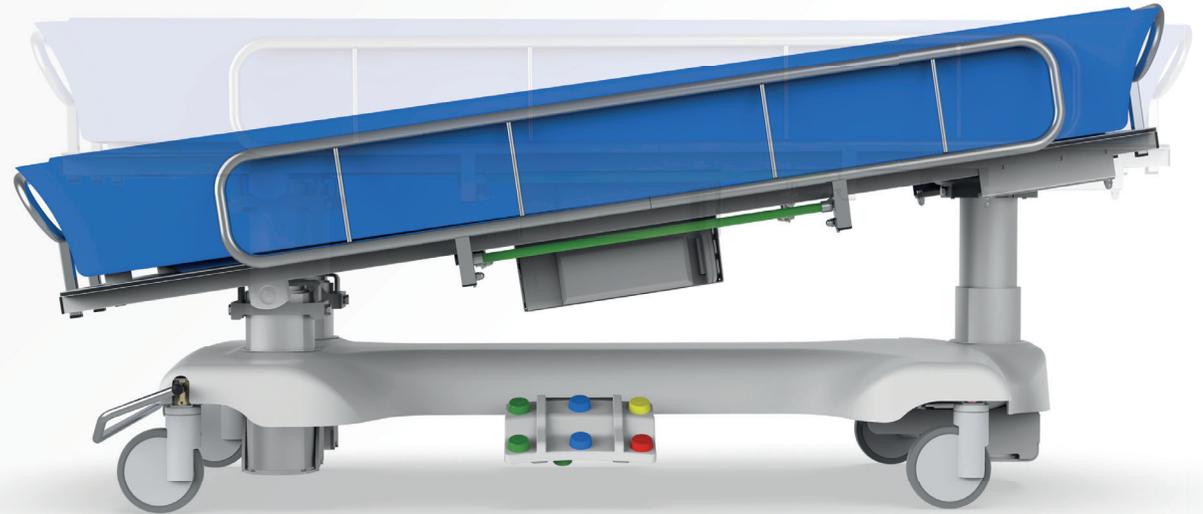

## TENTE branded castors

TENTE's high quality anti-static medical castors reduce the physical strain on nursing staff during transport and handling. The castors are made of permanent non-marking material. Castor covers facilitate cleaning, protect bearings from dirt and significantly extend their durability.

## Antitrendelenburg

The Antitrendelenburg function is a significant helper for faster water drainage.

## Central brake

A central brake operated by a metal bar ensures safe handling of the shower bed.

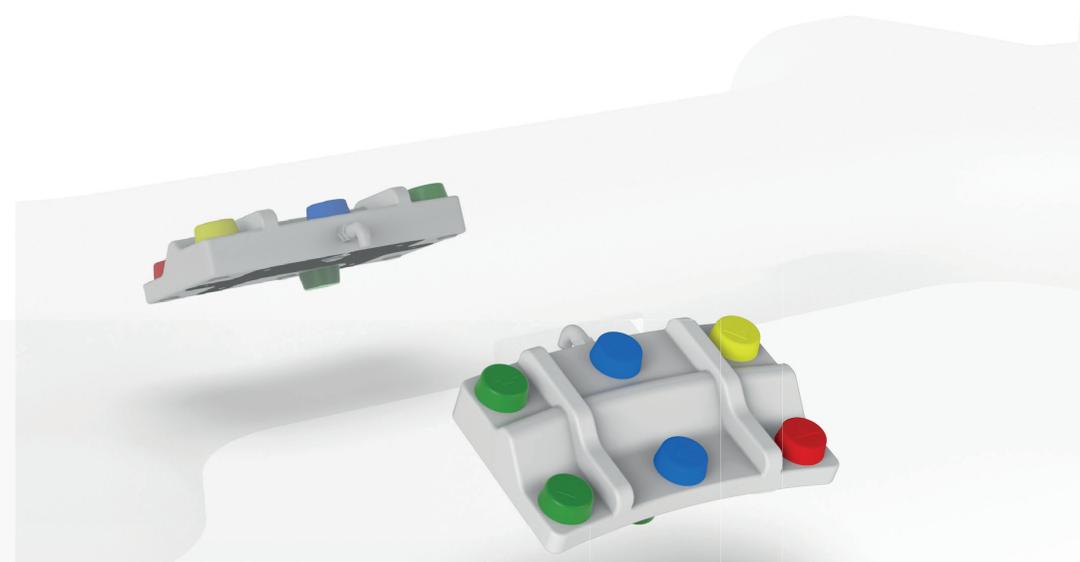

## Lateral tilt

Significantly reduces the physical strain on the caregiving staff during hygiene procedures on the bed.

## Shower tub

The removable shower tub is made of non-slip waterproof material. The bedding surface of the shower tub consists of a one-piece surface with longitudinal drainage grooves. A removable cushion is included in the tub for added patient comfort.

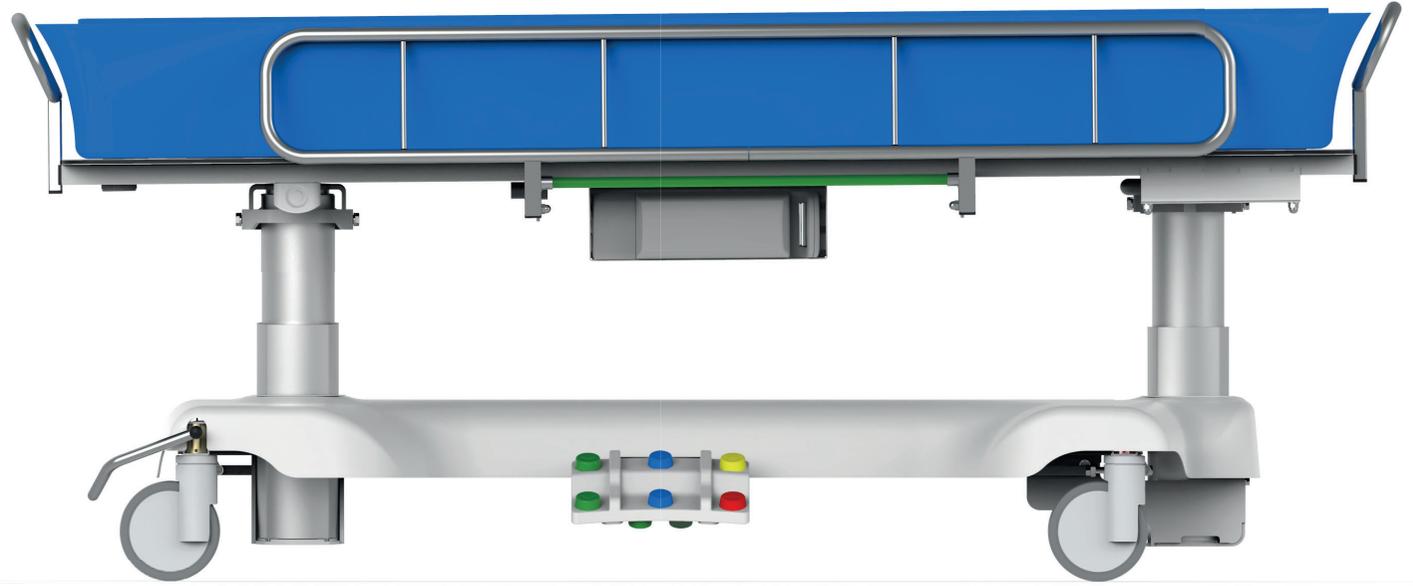

## Foot control

The couch is equipped with foot controls on each side of the bed. The foot controls allow easy adjustment of the mattress platform elevation, lateral tilt, and Antitrendelenburg position.

## Plastic chassis cover

The plastic cover protects the mechanism from the effects of moisture and also speeds up the daily cleaning of the shower bed.

## Technical parameters

Mattress platform (length x width) .....	195 x 80 cm
Outer bed dimensions (length x width) .....	210 x 88 cm
Mattress platform height .....	45 - 85 cm
Safe operating load of the bed.....	250 kg
Maximum patient weight .....	200 kg
Weight of the bed .....	110 kg
Lifting of the mattress platform .....	Electric
Mobile .....	Yes
Type of brakes .....	Central
Length of drain hose.....	30 - 70 cm
Castors .....	150 mm, plastic
Antitrendelenburg.....	15°
Lateral tilt .....	12°
